*Faculty of  
Computer  
Engeneering*

### **Golteens course**

2017-2018

*Lviv, Ukraine*

### **Ampli course**

2018-2019

*Lviv, Ukraine*

# Projects

## Portfolio website

HTML & CSS

*This is a portfolio website. There you can find short information about me, my skills, my projects (click on image to see live version on Github Pages). Also you can download my cv in the "Portfolio section". Contact me using one of the cases in the section "Contacts".*

## Bank Application

React.js      React-Redux  
Hooks      react-bootstrap

This is a Bank Application project. Here you can see your accounts, detail information about your account, send money to somebody and so on. This project is based on react-redux-hooks (useSelector, useDispatch, useState, useEffect and so on).

**Sources**

## Weather App

React.js      React-Redux

*This Weather App is based on react.js and react-redux. In this project I have used a real API, so this app works in real time. To manage state I used Redux. For requests I used Redux Thunks, axios.*

## Social Network

React.js      React-Redux

*This is a social network based on react.js and react-redux. This is a global project in which I have used many concepts, methods, libraries, modern approaches (hooks for example), side effects (interaction with the server for example). To manage state I use Redux.*
